

GBM Performant, the purest and most concentrated form of encapsulated calcium butyrate on the market.

Its coating ensuring a dust and odour free supplement, stable under pelleting conditions.

GBM Performant has a positive effect on the gut microbiome balance, the gut mucosal barrier and the immunity of the animal. All of this contributes to a healthy animal with good performance within an antibiotic growth promotor free production system.

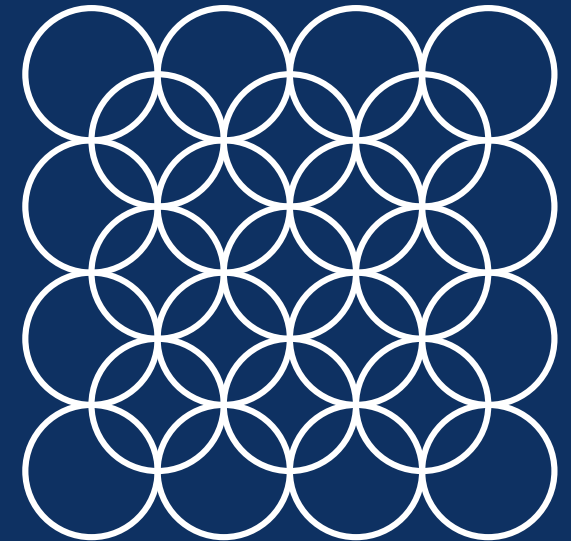

Many individual studies demonstrate the production benefits of GBM Performant:

- × Helps to maintain the natural balance of the intestinal flora
- × Improved FCR and weight gain
- × Improved overall health and immunity status
- × Dryer = better litter quality = lower ammonia concentrations

Encapsulated Calcium Butyrate Supplement for Broilers

Despite natural defence mechanisms, enteric problems continue to be the main concern in intensive poultry production. Therefore digestive health, in its broadest sense, has become the main priority in livestock production.

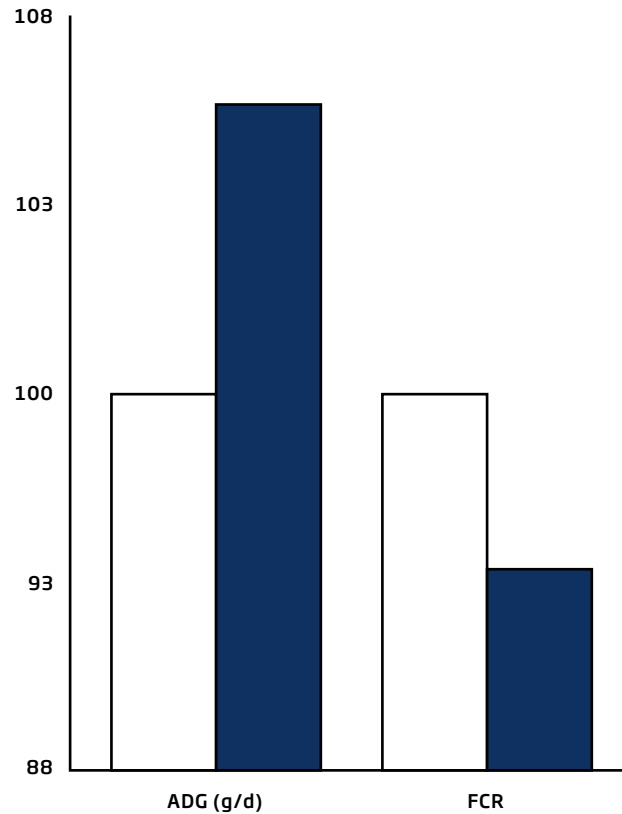

Feeding GBM Performant makes your broilers grow faster with less feed.

Trial results indicate GBM Performant on average generates *€554 equal to a ROI of 1:8 per 10000 animals.

*indicative, can vary depending prices and conditions
